All Systems Go for Andromeda Metals' Great White Project

The Association of Mining and Exploration Companies (AMEC) congratulates our South Australian member company Andromeda Metals (ASX: ADN) on today's announcement of the final approval for their Great White Project.

"The approval of Andromeda's *Program for Environment and Rehabilitation Program* (PEPR) is welcome news for South Australia's developing critical minerals sector," said Warren Pearce, AMEC Chief Executive Officer.

"Following extensive stakeholder engagement, best-practice consultation and comprehensive environmental studies, this approval demonstrates Government's confidence the company can comply with regulatory conditions set under the 2021-introduced mining legislation reforms."

The Great White Project has a 28-year life-of-mine expectancy, with up to 40 direct jobs created during commencement, and up to 70 jobs when the mine is expected to reach full capacity. The project also presents ongoing opportunities for industry and community collaboration and growth.

"In order to reach the State and Commonwealth's decarbonisation targets, more critical minerals mines are needed, and more investment into projects across South Australia is required to spur project development."

"Mining projects such as the Great White Project are an excellent example of the natural mineral wealth within South Australia, and the innovation explorers and miners are employing to safely extract these materials."

"AMEC welcomes continued opportunities to work with Andromeda Metals, the South Australian Government and the broader community, to ensure South Australia continues to progress opportunities to become a key supplier of the minerals that are essential to a decarbonised future."

"We congratulate the team at Andromeda, and their external consultants, for unlocking the next high-value mining operation in South Australia," said Mr Pearce.
